Image Processing: Cooperation between Biophysics and Mathematics

Research Groups Köster, Munk, Wardetzky

Student Assistant Position

We are looking for a motivated student to support us in processing microscopy images. The images are acquired in the frame work of a cooperative project in biophysics and are analyzed using mathematical methods. Your task will be to identify and test suitable tools for image processing, in particular for binarizing the images.

Programming experience (Python, Matlab) is useful. We also offer the possibility for conducting Bachelor's or Master's theses in this context (Mathematics, Physics, Computer Science).

The work hours per week can be adjusted to your availability.
